

Yamaha GX-505 Flat Cable Substitute

The flexible flat cable connecting the optical pickup to the CD PCB (AAX14360) has been substituted for a new type of cable (V2017700).

The original cable (AAX14360) has the contacts exposed on opposite sides of the cable. The new cable (V2017700) has the contacts exposed on one side only at each end of the cable.

To accommodate this change, connector CB2 on the CD PCB (V5503100) needs to be rotated 180 degrees to ensure that the contacts mate correctly with the new cable.
